

Type of skill	Check the skills you have.	Add a note to describe details. Or, add notes to make a plan for the skills you need to develop
Coding skills		
At least one, preferable two+ coding languages such as Java, Python, JavaScript or other	Python, C#, Java	It's been a while since I've last coded, I need to brush up and refresh my memory.
Software development		
Version control such as github		
Agile development methodology		
Object-oriented Programming		
Abstraction		
Encapsulation		
Inheritance	X	A while back I created a script that allowed me to click on an item and fill out all my info and automatically check out of a e-commerce site.
Polymorphism		
Software testing and debugging		
Basic testing terminology knowledge	X	
Unit Testing		
Problem solving and logical thinking	X	Working as a Help Desk Analyst, I speak to a lot of users with various experience with PCs. What I try to do is figure out what they need. Because the terminology they use will be much different than what I use. Sometimes some users will say they need to change their password when they really wanted to unlock their account. It's about asking listening to their needs and asking the right follow-up questions.
Written and verbal communication	X	In my line of work, I have to send out broadcast emails to the entire hospital if we're experiencing and planned or unexpected downtime on any applications. I also update status lines as well as send out a pop-up message if the org is experiencing any issues.
Teamwork	X	Constant communication with my colleagues over Microsoft Teams. As well as assisting each other with complicated troubleshooting issues. I also reach out to other teams about trouble shooting applications beyond my scope.
